**A Study of Improving Staff Nurses' Performance for Quality and
Affordable Health Care in Private Hospitals**

K Helen Rani

Research Scholar, Department of Nursing, Mansarovar Global University, Sehore, M.P., India.

ABSTRACT

Improving the performance of staff nurses is essential for providing quality and affordable health care in private hospitals. Nurses play a crucial role in patient care, as they are directly involved in monitoring patients, administering medications, maintaining medical records, and assisting doctors during treatment procedures. Their efficiency and professional skills greatly influence the overall quality of healthcare services. In private hospitals, it is important to maintain high standards of care while also controlling healthcare costs so that patients can receive effective treatment at a reasonable expense. Enhancing nurses' performance through proper training, skill development programs, and continuous education can help them deliver better care and manage resources more efficiently. Nurses can improve healthcare quality by following proper clinical guidelines, maintaining hygiene and infection control, communicating effectively with patients, and using medical resources wisely. In addition, support from hospital management, clear policies, and availability of necessary equipment can further strengthen nurses' performance. Educational materials such as pamphlets and guidelines can also help nurses understand cost-effective practices and quality improvement strategies.
